lamiids; Solanates; Solanaceae; Nicotiana.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Choi D., Kim H.M., Yun H.K., Yi S.Y., Bok S.H.;
Submitted (JAN-1996) to the EMBL/GenBank/DBBJ databases.
-!- FUNCTION: Metallothioneins have a high content of cysteine
residues that bind various heavy metals.
-!- SIMILARITY: Belongs to the metallothionein superfamily. Family 15.
                                                                                                                                                                                                                            TISSUE=Root;

The nucleic acid molecules, polypeptides and antibodies are useful for treating, preventing or diagnosing diseases such metabolic disorders, diabetes, obselty, infectious diseases (viral, bacterial, fungal, helminthic, and protozoal), anorexia, cancer, cardiovascular diseases (hypertension, atherosclerosis), morexia, cancer, cardiovascular diseases (hypertension, atherosclerosis), immune disorders, Alzheimer's disease, Parkinson's disease, epilepsy, immune disorders, Alzheimer's costeoarthritis), hematopoietic disorders, inflammatory skin disorders, asthma, and various dyslipidemias. The nucleic acids and polypeptides may also be used as targets for the identification of small molecules that confibration, hematopoiesis, wound healing and angiogenesis, in gene therapy, in generation of antibodies that bind immunospecifically to NOVX substances for use in therapeutic or diagnostic methods. The nucleic acids are further used as hybridization probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. This sequence corresponds to one of the NOVX proteins of the invention.
to, or having one or more conservative amino acid substitutions in, the proteins. The polypeptides, nucleic acid molecules and antibodies are useful in the manufacture of a medicament for treating a syndrome associated with a human disease, preferably a NOVX-associated disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NOVX; human; cardiomyopathy; atherosclerosis; hypertension; pulmonary stenosis; obesity; prostate cancer; diabetes; haemophilia; skin disorder; graft versus host disease; AIDS; asthma: lupus; Crohn's disease; inflammatory bowel disease; ulcerative colitis; multiple sclerosis; infectious disease; anorexia; Alzheimer's disease; Parkinson's disease; NOV4c.

                                                                           polynucleotides encoding them. The therapeutic is useful in the manufacture of a medicament for treating a syndrome associated with a human disease selected from pathology associated with the polypeptide. Diseases include cardiomyopathy, atherosclerosis, hypertension, pulmonary stenosis, obesity, prostate cancer, diabetes, haemophilia, skin disease, inflammancry bowel disease, locarative colitis, multiple sclerosis, inflammancry bowel disease, ulcerative colitis, multiple sclerosis, infectious disease, anorexie, Alzheimer's disease, or Parkinson's disease. They are also useful in detection assays, chromosome mapping, or tissue typing. This sequence represents the human NOV4c
                                                                                                                                                                                                                                                                                                                                                                                                   J, Bento P, Boldog F, Burgess C, Casman S, Bokor JC; R, Ellerman K, Fernandes E, Gerlach V, Grosse W, Gunther E; Heyes M, Lepley D, Li L, Macdougall JR, Malyankar UM; Parturajan M, Peyman JA, Rastelli L, Rieger D, Shenoy S; R, Smithson G, Stone D, Vernet C, Voss E;

DOSSING

```
The sequence represents a protein related to bone morphogenetic protein-1 (BMP-1), vascular endothelial growth factor (VEGF-E) and platelet derived growth factor (PDGF). Polypeptides and polynucleotides related to BMP-1, VEGF-E and PDGF are referred to as FCTRX peptides and nucleic acids.

VEGF-E and PDGF are referred to as FCTRX peptides and nucleic acids.

FCTRX proteins are useful for treating or preventing a disorder.

FCTRX proteins are useful for treating or preventing a disorder.

FCTRX proteins are useful for treating or preventing a disorder is characterised by insufficient or ineffective growth of a cell physiological interactions of the proteins in a mammal, where the disorder is characterised by insufficient or ineffective growth of a cell as characterised and intreatment of cancer, anaemia, associated nucleic acids are useful for both promoting and inhibiting growth of cells and tissues and in treatment of cancer, anaemia, and tissues and in treatment of cancer, anaemia, calabetic ulcers, obesity, infectious diseases, hyperpoliferative disorders, neurodegenerative disorders, neurodegenerative disorders, osteoarthritis, inflammatory disorders, neurodegenerative disorders, costeoarthritis, such as haemophilia, and neural disorders including Parkinson's disease, and ephlepsy and ephlepsy and ephlepsy
Novel growth factor polypeptides termed as FCTRX polypeptides, useful for treating cancer, cardiovascular and fibrotic diseases, diabetic ulcers, wound healing and neuronal disorders.
                                                                                                                                                                                                                                                                  Claim 1; Page 14-15; 171pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          g
                                                                           ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is the protein sequence of human FCTR2, as predicted from a cDNA clone isolated from pituitary gland tissue. The sequence is identical to the creminal region of FCTR1 (see ABB79643), also referred to as platelet derived growth factor D. suggesting the 2 proteins to be products of splice variants of a common gene. FCTR2 shows similarity to human growth factor FIGF (c-fos-induced growth factor) and to rat vascular endothelial growth factor D. The invention provides FGFCX and FCTRX growth factors, polypeptides and deletion variants, and methods of using these to treat, delay the onset of, or ameliorate, an inflammatory pathology, especially inflammatory bowel disease, a disease that occurs in the colon or small intestine, or Crohn's disease (all claimed). The FGFCX and FCTRX polypeptides and polynucleotides are also useful for treating growth and proliferative diseases such as cancer, angiogenesis, collagen formation, fibrotic and cardiovascular diseases or diabetic claims methods, chromosome mapping, tiseue typing, predictive medicine, diagnostic assays, and pharmacogenomics

                                                                                                                                              79
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to a new method of detecting the presence of 30664188 antigen in a sample. The invention is useful for detecting the presence of 30664188 in a biological sample (e.g. blood or its component originating from a mammal, preferably human), and for contributing to diagnosis of cancer in a subject. The present amino acid sequence represents a human FCTR protein, as described in the methods of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Detecting presence or amount of 30664188 antigen in a sample, by contacting the biological sample with agent that binds the antigen, and detecting the presence or amount of agent bound to the antigen.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to novel NOVX protein and their encoding DNA's, mature forms of the proteins or sequences that are at least 95% identical to, or having one or more conservative amino acid substitutions in, the proteins. The polypeptides, nucleic acid molecules and antibodies are useful in the manufacture of a medicament for treating a syndrome associated with a human disease, preferably a NOVX-associated disorder. The nucleic acid molecules, polypeptides and antibodies are useful for treating, preventing or disgnosing diseases such metabolic disorders,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Alsobrook JP, Bento P, Boldog FL, Burgess CE, Casman SJ; Crabtree-Bokor JR, Edinger SR, Ellerman K, Fernandes ER, Gerlach VL; Grosse WM, Gunther E, Gusev VY, Heyes MP, Lepley DM, Li L; Madougall JR, Malyankar UM, Millet I, Patturajan M, Peyman JA; Rastelli L, Rieger DK, Shenoy SG, Shimkets RD, Smithson G, Stone DJ; Vernet CAM, Voss EZ;

helminthic, and procozoal), anorexia, cancer, cardiovascular diseases (hypertension, atherosclerosis), neurodegenerative disorders, Alzheimer's disease, extrinson's disease, epilepsy, immune disorders as tarkinson's disease, epilepsy, immune disorders skin disorders, asthma, and various dyslipidemias. The nucleic acids and polypeptides may also be used as targets for the identification of small molecules that modulate or inhibit e.g. neurogenesis, cell differentiation, cell modulate or inhibit e.g. neurogenesis, cell differentiation, cell proliferation, hematopoiesis, wound healing and angiogenesis, in gene therapy, in generation of antibodies that bind immunospecifically to NOVX substances for use in therapeutic or diagnostic methods. The nucleic acids are further used as hybridization probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. This sequence corresponds to one of the NOVX proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         79
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Fibroblast growth factor-CX; FGF-CX; FCTRX; inflammatory bowel disease; inflammation; Crohn's disease; gene therapy; platelet-derived growth factor; PDGFD; human.

                                                                                                                                                                                                                                                    9
                    Promoting the growth of a population of cells, useful for treating inflammatory conditions, comprises contacting the at least one cell with a composition comprising FGFCX and/or FCTRX polypeptides.
                                                                                                                                                                                                                                                                      79
                                                                              The present invention is based upon methods of treating inflammatory conditions in the intestinal tract of mammala using fibroblast growth factor (FGP)-CX and/Or FCTRX(undefined) polypeptides and their encoding polynucleotides. The invention is useful for treating inflammatory pathology such as inflammatory bowel disease, inflammatory condition occurring in the colon or small intestine and Crohn's disease. The invention is also useful in gene therapy. The present sequence is human FCTRX protein. The sequence is also referred as human platelet-derived growth factor D (PDGFD) protein.

The therapeutic is useful in the manufacture of a medicament for treating a syndrome associated with a human disease selected from parhology associated with the polypeptide. Diseases include cardiomyopathy, atherosclerosis, hypertension, pulmonary stenosis, obesity, prostate cancer, diabetes, haemophilia, skin disease, graft versus host disease, AlDS, asthma, lupus, Crohn's disease, inflammatory bowel disease, ulcerative colitis, multiple saclerosis, infectious disease, annexaia, Alzheimer s disease, correction assays, chromosome mapping, or tissue typing. This sequence represents the human NOV4a
                                                                                                                                                                                                                                                                                           Gunther E;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated polypeptides and nucleic acids, useful for treating or preventing, e.g. cardiomyopathy, atherosclerosis, hypertension, obesity, prostate cancer, diabetes, hemophilia, AIDS, inflammatory bowel disease, or infectious disease.
                                                                                                                                                                                                                                                                                                                                                          ŝ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 VDLDRLNDDAKRYSCTPRNYSVNIREELKLANVVFFPRCLLVQRCGGNCGCGTVNWRSCT

Sequences ABB10981-ABB12310 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a mucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of identifying compounds which bind to polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may consider activities, including cytokine, cell proliferation or cell differentiation activities; including cytokine, cell proliferation or cell differentiation activities; seem cell growth factor activity; chancedulatory activity; activin- or inhibin-related activities; chancedulatory activity; activin- or inhibin-related activities; chancedulatory activity; activin- or inhibin-related activities; chancedulatory activities; preceptor or ligand activities; or metastasis.

Compound an encourage of activities; preceptor or ligand activities or metastasis.

Conditions, e.g., by protein or gene therapy. Such conditions include conditions, e.g., by protein or gene therapy. Such conditions and abnormal conditions, activities are therapy. Such conditions activities are therapy. Such conditions and abnormal conditions are useful for general egg., activity activities (e.g., activity are regeneration and anormal areticities and all proliferative retinopathy, atherosclerosis, coronary heart disease, arterial ischaemia, bone disorders (e.g., coronary heart disease, arterial ischaemia, bone disorders (e.g., coronary heart disease).
                                                                                                                                                                                                           Human; cytokine; cell proliferation; cell differentiation; growth factor; hematopodesis regulation; tissue growth; immunomodulator; activin; inhibin; chemotaxis; chemokinesis; thrombolysis; oncogenesis; proliferation; metastasis; cancer; tumour; haematopoietic disorder; proliferation; call disorder; lymphoid cell disorder; asthma; asthma; arthritis; chronic inflammatory condition; proliferative retinopathy; atherosclerosis; coronary heart disease; arterial ischaemia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject e.g. arthritis
                                                                                                                                                                                                                                                                                                                                                                               bone disorder; osteoporosis; vascular growth disorder;

         healing (e.g., of burns, incidence and ulcers), while those with immunomodulatory activities may be used in the treatment of viral, bacterial and fungal infections in addition to immune disorders. Polypeptides with growth factor activity may be used in cell cultures to promote cell growth. For example, such polypeptides may be used to manipulate stem cells in culture to give rise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug soreening techniques. The present sequence represents a novel human polypeptide of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                               The sequence represents a protein related to bone morphogenetic protein-1 (BMP-1), vascular endothelial growth factor (WEG-E) and platelet derived growth factor (PDGF). Polypeptides and polymcleotides related to BMP-1, vescular endothelial growth factor (BDGF).

C WEGF-E and PDGF are referred to as FCTRX petides and nucleic acids.

C WEGF-E and PDGF are useful for treating or preventing a disorder.

C FCTRX proteins are useful for treating or preventing a disorder aberrant expression, aberrant processing, or aberrant comparing of the proteins in a mammal, where the disorder is characterised by insufficient or ineffective growth of a cell or a sesociated nucleic acids are useful for both promoting and their associated nucleic acids are useful for both promoting and inhibiting clerophia, baldness, for treating cardiovascular and fibrotic disorders, diabetic ulcers, obesity, infectious diseases, hyperproliferative and disorders, neurodegenerative disorders, neurodegenerative disorders, of after versus host disease, capulation disorders such as haemophila, and neural disorders including Parkinson's disease, and or any particular and previous disease, multiple sclerosis, Huntington's disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                          Novel growth factor polypeptides termed as FCTRX polypeptides, useful for treating cancer, cardiovascular and fibrotic diseases, diabetic ulcers, wound healing and neuronal disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  101

The present sequence is the protein sequence of FCTRS, also referred to as platelet derived growth factor D (PDGFD) or human PDGFD. FCTRS is a splatelet derived growth factor D (PDGFD) or human PDGFD. FCTRS is a classification signal peptide, PDGF domain and N-Q1ycosylation site. Human FCTRS is most closely related to human PDGF C, B and A. The invention provides FGFCX and FCTRX growth factors, polypeptides and variants, and polymclectides conciding them, an inflammatory pathology, especially inflammatory bowel disease, a disease that occurs in the colon or small intestine, or crohn's disease (all claimed). The FGFCX and FCTRX polypeptides and polymclectides are also useful for treating growth and proliferative diseases such as cancer, angiogenesis, collagen formation, fibrotic and cardiovascular diseases or diabetic ulcers, and in wound healing. They can be used in screening and detection methods, chromosome mapping, tissue typing, predictive medicine, diagnostic assays, prognostic assays,

The invention relates to an isolated protein comprising a first polypeptide disulphide-bonded to a second polypeptide. The first and second polypeptides are from 113-138 amino acid residues and comprises 256-370 amino acid residues of human growth factor homologue ZVBGF4. The protein stimulates proliferation, differentiation, or migration of protein stimulates proliferation, differentiation, or migration of semanhorins. ZVBGF4 may be used to design ant/agonists of neuropilin-companient development, cartilage and limb development. T- and B-cell cuncer, autoimmune diseases, inflammation, retinopathies, haemangiomas, cardiovascular development, cartilage and limb development. T- and B-cell cuncer, autoimmune diseases, inflammation, retinopathies, haemangiomas, system diseases and peripheral nervous system diseases and peripheral nervous system diseases including stroke. The isolated protein is also used for a pharmaceutical composition as cherapeutic agents, diagnostic agents, and research tools and reagents. It can be used in the study and regulation of cell and tissues to control organ component, as components of cell culture media. The proteins can form development by modulating cell proliferation, migration, differentiation, or metabolism. The gene for human ZVEGF4 is located on chromosome 11922.3 crossing but not further defined in the specification).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    249
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Isolated growth factor analogue ZVEF4 proteins for pharmaceutical composition as, e.g. therapeutic agents, diagnostic agents, and research tools and reagents, includes polypeptides from amino acid residues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    190 VDLDRLNDDAKRYSCTPRNYSVNIREELKLANVVFFPRCLLVQRCGGNCGCGTVNWRSCT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Promoting the growth of a population of cells, useful for treating inflammatory conditions, comprises contacting the at least one cell with a composition comprising FGFCX and/or FCTRX polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    conditions in the intestinal tract of mammala using fibroblast growth factor (FGF)-Cx and/or FCTRX (undefined) polypeptides and their encoding polynucleotides. The invention is useful for treating inflammatory pathology such as inflammatory bowel disease, inflammatory condition occurring in the colon or small intestine and Crohn's disease. The invention is also useful in gene therapy. The present sequence is human FCTRX protein. The sequence is also referred as human platelet-derived growth factor D (PDGFD) cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 VDLDRLNDDAKRYSCTPRNYSVNIREELKLANVVFFPRCLLVQRCGGNCGCGTVNWRSCT

The invention relates to growth factor homologue zvegf4, its corresponding nucleic acid and methods of using them. The sequences of the invention are used in the study and regularion of cell and tissue development, as components of cell culture media and as diagnostic development, as components of cell culture media and as diagnostic skin wounds, including vehous stasis, ulears and other chronic, non-healing wounds, in fracture repair, skin grafting, in constructive cestablish vascular networks in transplanted cells and tissues, or in treating female reproductive tract disorders, including acute or chronic placental insufficiency and prolonged bleeding, it can also be used to promote endothelialisation of vascular grafts and stents, in treating acute or chronic lesions of the gastrointestinal tract or treating or repairing liver damage. Zvegf4 can also be used for treating or corporate competing liver damage. Zvegf4 can also be used for treating hepatic corporate growth and development and demarcate nervous system structures. The control of seases including multiple sclerosis, Alzheimer's disease or parkinson's disease. The polypeptides, mucleic acids and antibodies can also be used to diagnose or treat disorders associated with cell loss or abnormal cell proliferation (including cancer). The cinvention is useful in gene therapy. The present sequence is a fusion corporation is the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New zvegf4 polypeptides and nucleic acids, useful for diagnosing or treating cell loss or abnormal cell proliferation, e.g. cancer, treating full-thickness skin wounds or treating female reproductive tract
                                                                     Growth factor homologue; zvegf4; skin wound; venous stasis; ulcer; fracture repair; skin grafting; neovascularisation; female reproductive tract disorder; bleeding; gastrointestinal tract; liver damage; hepatic chronic passive congestion; CPC; central hemorrhagic necrosis; CHN; neurite growth; neuropathy; neurodegenerative disease; multiple sclerosis; Alzheimer's disease; Parkinson's disease; cell proliferation; cancer; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gilbertson DG;

second polypoptages are from 113-136 and residues and compiles.

258-370 amino acid residues of human growth factor homologue ZVEGF4. The protein stimulates proliferation, differentiation, or migration of mesenchymal cells and may modulate activities mediated by cell surface semaphorins. ZVEGF4 may be used to design ant/agonists of neuropilin-semaphorin interactions which may be of use in neurite growth.

5 cardiovascular development, cartilage and limb development. T- and B-cell functions as well as treating rheumatoid arthritis, various forms of cancer, autoimmune diseases, inflammation, retinopathies, haemangiomas, system diseases and peripheral nervow damage, central nervows.

5 cancer, autoimmune disparance in near nerve damage, central nervows.

5 cancer, autoimmune disparance in nerve damage, central nervows.

5 cancer, autoimmune disparance nerve damage, central nervows.

5 cancer, autoimmune paripheral nervous system diseases including stroke.

5 cancer, adminer, diagnostic agents, and research tools and reagents.

5 cancer be used in the study and regulation of cell and tissue development, as components of cell culture media. The proteins can form chomomultimers or heteromultimers that act on tissues to control organ development by modulating cell proliferation, migration, differentiation, development sequence represents a located on chromosome 11q22.3

5 cancer and the control or the specification of claimed but not further defined in the specification)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          diagnostic agents, and research
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated protein comprising a first polypeptide disulphide-bonded to a second polypeptide. The first and second polypeptides are from 113-138 amino acid residues and comprises

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to growth factor homologue zvegf4, its corresponding nucleic acid and methods of using them. The sequences of the invention are used in the study and regulation of cell and tissue development, as components of cell culture media and as diagnostic agents. The zvegf4 polypeptide can be used in treating full-thickness skin wounds, including venous stasis, ulcers and other thronic, non-healing wounds, in fracture repair, skin grafting, in constructive surgery to promote neovascularisation and increase skin flap survival, to establish vagcular networks in transplanted cells and tissues, or in transplanted cells and tissues, or in transplanted cells and tissues, or in transplanted relations in the construction placental insufficiency and prolonged bleeding. It can also be used to

promote endothelialisation of vascular grafts and stents, in treating acute or chronic lesions of the gastrointestinal tract or treating or repairing liver damage. Zvegf4 can also be used for treating hepatic chronic passive congestion (CPC) and central haemorrhagic necrosis (CHN). Zvegf4 proteins, agonists and antagonists can also be used to modulate neurite growth and development and demarcate nervous system structures. It can also be used for treating peripheral neuropathies or heurodegenerative disease including multiple sclerosis, Alzheimer's disease or Parkinson's disease. The polypeptides, nucleic acids and antibodies can also be used to diagnose or treat disorders associated with cell loss or abnormal cell proliferation (including cancer). The invention is useful in gene therapy. The present sequence is a fusion protein used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New polynucleotide encoding growth factor, and its encoded protein, useful for diagnosing or treating disorders associated with dysfunction of the growth factors, e.g. diabetes, osteoporosis, hypercalcemia or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention discloses an isolated human growth factor polynucleotide, designated A.ctg12831-000000.10.0, and the polypeptide it encodes.

```
Secreted cellular growth factors are molecules which bind to cell surface receptors to regulate a variety of cellular pathways. Growth factors are important in signalling pathways related to embryonic patterning events, cell cycle control, apoptosis, cellular differentiation, cell motility and gene expression. Also disclosed are methods for identifying and gene expression. Also disclosed are methods for identifying condition, or susceptibility to a pathogenic condition, that is associated with a genetic alteration in the growth factor. The growth factor polynucleotide is useful for diagnosing, prognosing or treating (e.g. gene therapy) disorders that are associated with dysfunction of the cyrowth factors, such as developmental and growth disorders, cardiovascular disorders, neurological disorders, metabolic disorders, cancer or immunological diseases. In particular, the polynucleotide is useful for treating or diagnosing e.g. diabetes, osteoporosis, where factors of growth factors. The sequence presented is the human growth factor. A. Ctg12831-000000.10.0, which is disclosed as being encoded by the DNA presented in ABX11387
                                                                                                                                                                                                                                                                                                                                                                                                                    ö

The present sequence is an N-terminally truncated polypeptide of human platelet derived growth factor (PDGP)-D, formally known as Vascular Endothelial Growth Factor (VEGF)-G. It is derived from human foetal lung lambdagt10 cDNA library. It belongs to the VEGF/PDGF family. It functions as an activator of proliferation, differentiation, growth and motility of cells, that express PDGF-D receptor. This sequence is useful for inhibiting the growth of tumours, that express PDGF-D. Expression of PDGF-D and its proteolytic claevage for generating an activated truncated form is useful for regulating receptor binding specificity of PDGF-D. PDGF-D and integonist is useful for inhibiting tissue remodelling during the invasion of tumour cells into normal cells. PGGF-D may be used to treat wounds, atherosclerosis, metastasis and migration of smooth muscle cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               269
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       09
              Novel polynucleotides encoding a novel growth factor of cells expressing a platelet-derived growth factor, useful for diagnostic and therapeutic applications, e.g. concerning cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      antidiabetic; anorectic; cardiant; hypotensive; antiarteriosclerotic; anorectic; virucide; antibacterial; fungicide; protozoacide; nootropic; neuroprotective; antiparkinsonian; anticonvulsant; osteopathic; antiarthritic; antiinflammatory; dermatological; antiasthmatic; antilipemic, gene therapy; metabolic disorder; diabetes; obesity; infectious disease; anorexia; cancer; cardiovascular disease; hypertension; atherosclerosis; neurodegenerative disorder; Alzheimer's disease; Parkinson's disease; epilepsy; immune disorder; asthma; dyslipidemia; neurogenesis; inflammatory skin disorder; asthma; dyslipidemia; neurogenesis; cell differentiation; hematopoiesis; wound healing; angiogenesis;

    The invention relates to novel NOVX protein and their encoding DNA's, mature forms of the proteins or sequences that are at least 95% identical co, or having one or more conservative amino eaid substitutions in, the proteins. The polypeptides, mucleic acid molecules and antibodies are useful in the manufacture of a medicament for treating a syndrome sesociated with a human disease, preferably a NOVX-associated disorder. The nucleic acid molecules, polypeptides and antibodies are useful for treating, preventing or disgnosing diseases such metabolic disorders. The nucleic acid molecules, polypeptides and antibodies are useful for treating, preventing or disgnosing diseases such metabolic disorders, diabetes, obedity, infectious diseases (viral, bacterial, fungal, helminthic, and protozoal), anorexia, cancer, cardiovascular diseases (hypertension, atherosclerosis), neurodegenerative disorders, Alzheimer's disease, Parkinson's disease, epilepsy, immune disorders Alzheimer's costeoarthritis), hematopoiesis, immune disorders as the molecules that also be used as targets for the identification of small molecules that confideration, hematopoiesis, wound healing and anglogenesis, in generation of antibodies that bind immunospecifically to NOVX substances for use in therapeutic or diagnostic methods. This sequence acids are further used as hybridization probes, in chromosome mapping, the use one of the NOVX proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          294

This invention describes novel human NOVX polypeptides and the polynucleotides encoding them. The therapeutic is useful in the manufacture of a medicament for treating a syndrome associated with a human disease selected from pathology associated with the polypeptide. Diseases include cardiomyopathy, atherosclerosis, hypertension, pulmonary stenosis, obesity, prostate cancer, diabetes, haemophilia, skin disease, graft versus host disease, AlDS, asthma, lupus, Crohn's disease, inflammatory bowel disease, ulcerative colitis, multiple sachronis, infections disease, anorexia, AlZabaimar's disease, anorexia, PAlZabaimar's disease, chromosome mapping, or tissue typing. This sequence represents the human NOV4e
                    Claim 1; SEQ ID NO 46; 206pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                   Seguence 347 AA;
                                                                                                                                                                                                                                                                                                                                                       protein.

Sequence 8, Application US/09438046

Patent No. 6706687

GENERAL INFORMATION:

APPLICANT: ERIKSSON, UIF

APPLICANT: DEXEK KATIN

APPLICANT: DONTN, Annica

APPLICANT: PONTN, Annica

APPLICANT: ALITALO, KATINALO, RATION

APPLICANT: ALITALO, KATINALO, RATION

APPLICANT: OESTHAN, AND

TITLE OF INVENTION: PLATELET-DERIVED GROWTH FACTOR D, TITLE OF INVENTION: PLATELET-DERIVED GROWTH FACTOR D, TITLE OF INVENTION: PLATELET-DERIVED GROWTH FACTOR D, TITLE OF INVENTION: PLATELET-OR AND USES THEREOF

FILE REFERENCE: UIF EXIKSSON et al. 1064-44833

Sequence 2, Application US/10039847A

Patent No. 6827938

SEGNERAL INFORMATION:
APPLICANT: Hart, Charles E.
APPLICANT: Topouzis, Stavros
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR IMPROVING
TITLE OF INVENTION: KIDNEY FUNCTION
FILE REFERENCE: 00-100
CURRENT APPLICATION NUMBER: US/10/039,847A
CURRENT FILING DATE: 2002-06-17
PRIOR FILING DATE: 2000-10-30
NUMBER OF SEQ ID NOS: 10
SOFTWARE: FastSEQ for Windows Version 3.0
SEQ ID NO 2
LENGTH: 370

Sequence 4, Application US/10039847A

Patent No. 6827938

GENERAL INFORMATION:

APPLICANT: Hart, Charles E.

APPLICANT: Hart, Charles E.

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR IMPROVING

TITLE OF INVENTION: KIDNEY FUNCTION

FILE REFERENCE: 00-100

CURRENT APPLICATION NUMBER: US/10/039,847A

CURRENT FILING DATE: 2002-06-17

PRIOR APPLICATION NUMBER: US 60/244,479

PRIOR FILING DATE: 2002-10-30

NUMBER OF SEQ ID NOS: 10

SOFTWARE: FASELSEQ for Windows Version 3.0
Sequence 4, Application US/09808972

Sequence 4, Application US/09808972

Patent No. 6630142

GENERAL INFORMATION:

APPLICANT: Hart, Charles E.

APPLICANT: TOPOUZIS, Stavros

APPLICANT: TOPOUZIS, Stavros

TITLE OF INVENTION: METHOD OF TREATING FIBROPROLIFERATIVE

TITLE OF INVENTION: DISORDERS

FILE REFERENCE: 00-79
